

KiranaCart — Orders & Customer Analysis

Customers, Categories, Retention & AOV

Prepared by: Naveen Prakash

Tool: PostgreSQL 18

Scope: Delivered orders only, unless noted

Key Metrics at a Glance

16.0% Revenue from top 10 customers	27.7% Electronics share of revenue	36.5% Customer repeat rate	Rs 28.98 Dashboard AOV overstatement
---	--	--------------------------------------	--

Executive Summary

- **Customers:** revenue is whale-skewed — the top 10 customers alone account for 16.0% of delivered revenue and the top ~1% for 27.3%. A loyalty pilot should target this metro-heavy cohort (Mumbai, Bengaluru, Hyderabad, Chennai) first.
- **Categories:** Electronics leads at 27.7% of revenue on price, with Grocery close behind at 17.8% on volume. The Q3 marketing budget should weight toward these two rather than spreading evenly across all eight categories.
- **Retention:** the 36.5% repeat rate is healthy for a marketplace, but the 63.5% one-and-done cohort — not the repeat cohort — is the larger, more fixable leak for Growth to target.
- **AOV & data quality:** business AOV is Rs 1,421.53, with a clear Oct–Nov festive volume spike (~1.7x normal order count; AOV itself stays flat). The dashboard's Rs 1,450.51 figure is inflated by Rs 28.98 because AVG() silently drops 187 free/promo orders that the correct SUM/COUNT(*) definition counts at Rs 0.

Full breakdowns, queries, and result tables for each finding follow below.

Detailed Findings

1. Top 10 Customers by Revenue (for the loyalty pilot)

#	Customer ID	Name	City	Lifetime Revenue (Rs)	Delivered Orders
1	1286	Anika Yadav	Mumbai	2,81,433.01	176
2	1539	Aadhya Agarwal	Mumbai	2,42,042.51	160
3	1491	Rohan Gupta	Ludhiana	2,25,013.24	147
4	434	Imran Bansal	Indore	2,23,973.59	150
5	897	Aarav Rao	Jodhpur	2,14,351.92	165
6	1961	Rahul Ahmed	Bengaluru	2,12,939.98	162
7	1727	Siddharth Chopra	Hyderabad	1,88,125.64	121
8	536	Aadhya Naidu	Chennai	1,86,722.27	128

#	Customer ID	Name	City	Lifetime Revenue (Rs)	Delivered Orders
9	1312	Farhan Das	Chennai	1,76,382.49	122
10	385	Yash Bose	Mumbai	1,71,632.21	124

One line for Finance: the top-10 customers together are 16.0% of delivered revenue; the top ~1% (top 20 customers) are 27.3%. A loyalty pilot on this cohort protects a disproportionate slice of revenue — it is a whale-skewed, metro-heavy list led by Mumbai, Bengaluru, Hyderabad and Chennai.

2. Category Revenue Mix (for the Q3 marketing budget)

Category	Revenue (Rs)	% of Total
Electronics	37,62,298.43	27.7
Grocery	24,15,604.22	17.8
Fashion	21,12,632.15	15.6
Home & Kitchen	20,48,525.94	15.1
Sports	11,34,967.14	8.4
Beauty	10,49,975.98	7.7
Toys	5,54,089.50	4.1
Books	4,91,227.55	3.6

One line for Merchandising: Electronics leads category revenue at 27.7%, with Grocery second at 17.8% — Electronics wins on price per unit, Grocery on volume. The Q3 budget should weight toward Electronics and Grocery; Books and Toys trail and are lower priority.

3. Repeat Rate (the retention question the CEO doubts)

Customers Who Ordered	Repeat Customers	Repeat Rate (%)
1,371	500	36.5

One line for Growth: repeat rate is 36.5% — healthy for a marketplace but below quick-commerce norms — and the 63.5% one-and-done cohort is the real leak. Note: the denominator is customers who ordered (1,371), not all 2,000 registered customers.

4. AOV Overall + Monthly Trend (and the dashboard mismatch)

Business AOV (SUM / COUNT): Rs 1,421.53

Naive dashboard AOV (AVG): Rs 1,450.51 — higher by Rs 28.98

Monthly trend: 24 rows, Jan-2024 through Dec-2025 — a clear Oct–Nov festive lift, order volume up, AOV itself roughly flat

Monthly order volume & AOV:

Month	Orders	AOV (Rs)
Jan-2024	329	1,484.02
Feb-2024	336	1,434.23
Mar-2024	335	1,498.82

Month	Orders	AOV (Rs)
Apr-2024	348	1,435.19
May-2024	336	1,463.30
Jun-2024	341	1,543.06
Jul-2024	360	1,430.36
Aug-2024	328	1,424.23
Sep-2024	348	1,364.60
Oct-2024	582	1,473.01
Nov-2024	584	1,478.49
Dec-2024	347	1,364.84
Jan-2025	326	1,510.53
Feb-2025	312	1,532.42
Mar-2025	341	1,359.16
Apr-2025	331	1,505.35
May-2025	354	1,382.94
Jun-2025	348	1,455.08
Jul-2025	379	1,389.29
Aug-2025	370	1,372.90
Sep-2025	327	1,542.81
Oct-2025	591	1,436.07
Nov-2025	597	1,420.13
Dec-2025	324	1,550.43

Why the mismatch: the dashboard's AVG(order_total) drops the 187 delivered orders with a NULL total (free/promo orders), so it reads Rs 28.98 higher than the business SUM/COUNT(*) number. The business wants the SUM/COUNT(*) definition, since freebies are real fulfilled orders that should count as Rs 0 in the denominator, not be silently excluded.

Dataset is synthetic-but-realistic (models a mid-market Indian marketplace); it is not a real employer's data.
